Note: All visualization, deliverables and reports are within the R-Shiny dashboard web application.

How to run the dashboard application
Step 1: Unzip the folder named 'SocGen'
Step 2: Set 'SocGen' as the working directory in R studio
Step 3: Run the script – '2_PartA.R'
Step 4: All the required objects required for the application to run are saved in the .rds files

Explanation of files (if needed)
Folder www – PDF reports saved
Loan_data_defaults.csv – original dataset
.rds files – stores objects and trained data necessary for the dashboard application
1_Data Preparation.R – script to clean original dataset and store .rds
2_PartA – script for the actual dashboard application
Remaining .R files – used to run code without cluttering the main script
